

Since 1954, SPEX CertiPrep is the industry leader in the CRM marketplace meeting the needs of laboratories worldwide with innovation and research. Accredited by A2LA to ISO/IEC 17025:2017 & ISO 17034:2016. Certified by DQS to ISO 9001:2015.

Consumer Safety Compliance Standards

New regulations are constantly being enacted to protect consumers from a variety of potentially dangerous compounds and elements. Recent global regulations have restricted levels of heavy metals in consumer products and waste electronics. Regulations have also been enacted to control a variety of phthalates in children's products. SPEX CertiPrep has continued to lead the Certified Reference Materials field by creating a line of Consumer Safety Compliance Standards for use with these new testing regulations.

Phthalates in Polyvinyl Chloride (PVC)

Polyvinyl chloride, or PVC, is a very common plastic used in a wide range of common consumer products, from children's toys and care items to building and construction materials. In the US, ASTM and the CPSC have designated methods for testing children's toys and childcare articles for compliance with the restricted use of six designated phthalates: DBP, BBP, DEHP, DNOP, DIDP, and DINP.

SPEX CertiPrep is proud to offer the first Certified Reference Materials for phthalates in polyvinyl chloride produced under the guidelines of ISO 9001:2015, ISO/IEC 17025:2017 and ISO 17034:2016.

Designed for Methods:

- US Methods CPSC-CH-C1001-09.3 • ASTM D7823-13
- EU Directive 2005/84/EC

Phthalates in Polyvinyl Chloride

Description	CAS #	Concentration	Volume	Matrix	Part #
Diisodecyl phthalate (DIDP)	26761-40-0	30,000 µg/g	1.5 g	Polyvinyl chloride	CRM-PVC001
Diisononyl phthalate (DINP)	28553-12-0	30,000 µg/g			
Bis-(2-Ethylhexyl) phthalate (DEHP)	117-81-7	3,000 µg/g

Polyvinyl Chloride (PVC) Phthalate Blank

Description	Volume	Matrix	Part #
Polyvinyl Chloride Phthalate Blank (to be used for testing PVC phthalates, part # CRM-PVC-001 and C1001-09)	1.5 g	Polyvinyl chloride	CRM-PVCBLK

Phthalates in Polyethylene (PE)

Polyethylene (PE) is one of the world's most common plastics. Polyethylene is used in a variety of common consumer products including children's toys and care items. Current US regulations limit the concentrations of certain phthalates (DBP, BBP, DEHP, DNOP, DIDP, and DINP) in childcare articles and children's toys. Laboratories are now tasked with the analysis of children's toys for these potentially hazardous phthalates.

Designed for Methods:

- US Methods CPSC-CH-C1001-09.3 • ASTM D7823-13
- EU Directive 2005/84/EC

Phthalates in Medium Density Polyethylene

Description	CAS #	Concentration	Volume	Matrix	Part #
Diisononyl phthalate (Branched) (DINP)	28553-12-0	30,000 µg/mL	5 g	Polyethylene	CRM-PE001
Diisodecyl phthalate (DIDP)	26761-40-0	30,000 µg/mL

Plastic Additives

Plastic additives or Plasticizers are chemicals added to increase the plasticity or fluidity of many polymer materials. Additives for plastic can be used to change the physical properties of polymers, add colorants or fragrances, or provide a finish to the final product.

These plastic additives are most commonly found as phthalate esters. The safety of the use of these phthalate esters or phthalates has been a topic of great discussion and regulation. Many phthalates are under governmental restriction for use in a wide variety of consumer products. The use of phthalates in the consumer world is ubiquitous and many analytical labs are now tasked to quantify the regulated plasticizers while ruling out the presence of other similar plasticizers.

Standards are a critical part of the analysis of plasticizers in order for a laboratory to determine the concentration of the truly regulated plasticizers from a similar type or form of plasticizer.

SPEX CertiPrep's full line of plasticizer compound standards can assist the analytical laboratory with all of their plasticizer analyses by all the current analytical methods including GC/MS and LC/MS.

Acetaldehyde

Acetaldehyde is one of the most common aldehydes that occur in nature and industrial processes. Naturally occurring, acetaldehyde is found as a byproduct of ethanol fermentation in alcoholic beverages, and yeast products such as bread and ripe fruit. Acetaldehyde forms by degradation of PET exposed to high temperatures or high pressures.
